Prospects of Profit and Losses

Any possible gain results from the Participation-related participation in the positive performance of the Underlying. As a fundamental rule, the gain share is not subject to an upper limit.
These products guarantee Capital protection expressed in per cent at maturity: With non 100% guaranteed products, the investor may receive less back than the Issue Price at maturity. It should also be noted that participation in the performance of the Underlying is limited by the Participation.

Even if the performance of the Underlying is positive the price of the product during the term can be considerably below the Issue Price. Potential investors should bear in mind that price changes to the Underlying, as well as other influencing factors, may have a negative effect on the value of structured products.

Significant Risks for Investors

Currency risks

If the Underlying or Underlyings is/are denominated in a currency other than the product's Reference Currency, investors should bear in mind that this may involve risks due to fluctuating exchange rates and that the risk of loss does not only depend on the performance of the Underlying(s) but also on any unfavourable performance of the other currency or currencies. This does not apply for currency-hedged products (quanto structure).

Market risks

The general market performance of Securities is dependent in particular on the development of the capital markets which, for their part, are influenced by the general global economic situation as well as by the economic and political framework conditions in the respective countries (so-called market risk). Changes to market prices such as interest rates, commodity prices or corresponding volatilities may have a negative effect on the valuation of the Underlying(s) or the Structured Product.

Disruption risks

There is also the risk of market disruptions (such as trading or stock market interruptions or discontinuation of trading) or other unforeseeable occurrences concerning the respective Underlyings and/or their stock exchanges or markets taking place during the term or upon maturity of the Structured Products. Such occurrences can have an effect on the time of redemption and/or on the value of the Structured Products.
In the event of trading restrictions, sanctions and similar occurrences, the Issuer is entitled, for the purpose of calculating the value of the Structured Product, to include at its own discretion the Underlying instruments at their most recently traded price, at a fair value to be established at its sole discretion or indeed as worthless, and/or additionally to suspend pricing in the Structured Product or liquidate the Structured Product prematurely.

Secondary market risks

Under normal market conditions, the Issuer or the Lead Manager intend to post bid- and ask-prices on a regular basis. However, neither the Issuer nor the Lead Manager is under any obligation with respect to investors to provide such bid- and ask-prices for specific order or securities volumes, and there is no guarantee of a specific liquidity or of a specific spread (i.e. the difference between bid- and ask-prices), for which reason investors cannot rely on being able to purchase or sell the Structured Products on a specific date or at a specific price.

Issuer risk

The value of Structured Products may depend not only on the performance of the Underlying(s), but also on the creditworthiness of the Issuer and the Guarantor, which may change during the term of the Structured Product. The investor is exposed to the risk of default of the Issuer and the Guarantor. For further information on the rating of Bank Vontobel AG or Vontobel Holding AG , please see the Base Prospectus.

Risks relating to potential conflicts of interest

There may be conflicts of interest at the Vontobel Group companies that could have a negative impact on the value of the Structured Products. For example, Vontobel Group companies may enter into or participate in trading and hedging transactions relating to the Underlying. They may also perform other functions relating to the Structured Products (e.g. as Calculation Agent, Index Sponsor and/or Market Maker) which enable them to determine the composition of the Underlying or calculate its value. Vontobel Group companies may also receive non-public information relating to the Underlying. It should also be noted that the payment of distribution fees and other commissions to financial intermediaries could result in conflicts of interest to the detriment of the investor, as this could create an incentive for the financial intermediary to distribute products with a higher commission preferentially to its clients. As market maker, Vontobel Group companies can determine the price of Structured Products themselves to a large extent and determine it on the basis of various factors and earnings considerations.
Please also note the further, detailed description of potential conflicts of interest and their impact on the value of the Structured Products as contained in the Base Prospectus.
