Significant Risks

Prospective Investors should ensure that they fully understand the nature of this Product and the extent of their exposure to risks and they should consider the suitability of this Product as an investment in the light of their own circumstances and financial condition. Products involve a high degree

of risk, including the potential risk of expiring worthless. Potential Investors should be prepared in certain circumstances to sustain a total loss of the capital invested to purchase this Product as well as the transaction costs. Prospective Investors shall consider the following important risk factors

and read the section "Risikofaktoren" of the Programme for details on all other risk factors to be considered.

This is a structured product involving derivative components. Investors should make sure that their advisors have verified that this Product is suitable for their portfolio taking into account the investor's financial situation, investment experience and investment objectives.

The terms and conditions of the Product may be subject to adjustments during the lifetime of the Product as set out in the Programme.

Product Specific Risks: Unless this Product is capital protected, investors may lose some or all of their investment as well as the transaction costs as they are fully exposed to the performance of the Underlyings. The Product does not confer any claim to receive rights and/or payments of the Underlying, such as dividend payments, unless explicitly stated in the documentation governing the Product. Please refer to the Product Documentation as regards the further Product specific risk factors to be taken into account.

Issuer Risk: Investors are exposed to the credit risk of the Issuer. If the Issuer is not able to make a payment or becomes insolvent, investors could lose some or all of their investment.

Market Risk: Market risk may have a negative impact on the value of and the return on an investment in the Product. Market risk is the risk associated with the effect of changes in market factors such as interest and foreign exchange rates, equity and commodity prices, credit spreads or implied volatilities, on the value of assets and liabilities held for both the short and long term. Market risk may also lead to an early redemption of the Product (e.g. in the event of a hedging disruption).

Liquidity Risk: The Issuer or, as the case may be, the guarantor or a third party appointed by the Issuer or guarantor, if any, intends to act as market maker in relation to the Product and it will use commercially reasonable efforts to provide indicative bid and offer prices for the Product

on a regular basis under normal market conditions. However, such market maker does not have an obligation to provide prices for the Product. Liquidity of the Product in the secondary market may be limited and an active trading market for the Product may not develop. Accordingly, investors may not be able to sell their Product.

Currency Risk: If the investor's reference currency is different from the currency, in which the Product is denominated, the investor bears the currency risk between the two currencies. The fluctuations in exchange rates could have an adverse effect on the value of or return on an investment in the Product, even if the redemption amount would otherwise provide for a positive return. If the Underlyings are calculated in a currency different from the Currency of the Product, the conversion into the Currency of the Product will be carried out at the relevant exchange rate.

Early Termination and Reinvestment Risk: The Product may be redeemed prior to its maturity (be it by declaration of the issuer or as a result of certain events specified in the terms of the Product) and investors must consider that in case of such an early redemption, investors will not receive any further coupon payments after the occurrence of the early redemption and the early redemption amount may be significantly below the issue / purchase price paid and the redemption amount payable at maturity. Investors may not be able to reinvest the early redemption amount in a financial instrument with the same profit potential and additional transaction costs may be incurred as a consequence of a reinvestment of the early redemption amount.

Illiquidity of Underlying: One or, if applicable, more of the Underlyings might be or become illiquid over the lifetime of the Product. Illiquidity of an Underlying might lead to larger bid/offer spreads of the Product and/or to an extended time period for buying and/or selling the Underlying respective to acquire, unwind or dispose of the hedging transaction(s) or asset(s) or to realise, recover or remit the proceeds of such hedging transaction(s) or asset(s) which might implicate a postponed redemption or delivery and/or a modified redemption amount, as reasonably determined by the Calculation Agent.

Additional Information and Risk Factors related to Products linked to Collective Investment Schemes ("CIS")

Investing in the Product is not the same as investing in the reference CIS. Investing in the Product is not the same as investing in the Underlying or equity(ies) or assets underlying the CIS. Changes in the market price of the Underlying, and/or equity(ies) or assets underlying the CIS, may not lead to any corresponding change in the market value of, or potential redemption under, the Product.

The market value of the Product will fluctuate depending on factors such as market interest rate movements, the financial condition of the issuer, the market's view of the credit quality of the issuer, the value of the embedded option(s), the price performance and price volatility of the Underlying. If the Investor sells the Product back to the Issuer or Lead Manager or any appointed third party before expiry, the amount the Investor receives for the Product may be substantially less than the issue price paid for the Product. In extreme circumstances, the Investor may lose 100% of the initial investment amount.

Risk related to CISs in general

The Underlying is managed by its manager and the investment objectives and investment restrictions of the Underlying may change from time to time. Neither the Issuer, Lead manager nor the Investors have any control over the decisions made by the manager regarding the Underlying and have no rights against the manager for its decisions. Such decisions may have any adverse impact on the potential gain/loss of the Product.

In addition, the applicable laws and regulations governing the Underlying may also restrict the operations of the Underlying and restrict their ability to achieve the investment objectives. Such risks may have a negative impact on the performance of the Underlying and therefore the potential return of the Product.

Risk factors specific to Products linked to an Exchange Traded Fund ("ETF")
The investment objective of most ETFs is to track the performance of the equity(ies) or assets underlying the ETFs or, as the case may be, a specific

index. However, increases in the price performance of the equity(ies), assets underlying the ETFs or specific index may not lead to an increase in the market price of the ETFs. Also, any increase(s) in the market prices of the ETFs or the equity(ies) or assets underlying the ETFs or the level of the related index (as the case may be) may not lead to an increase in the market value of the Product of the same magnitude or even any increase at all. Investors should note that ETFs are or may be exposed to the political, economic, currency and other risks related to the underlying asset pool or index that the ETFs are designed to track

Some ETFs may not invest directly in the equity(ies), underlying assets or constituents of the specified index which they track, but instead may synthetically replicate the performance of the referenced equity(ies), underlying assets or specified index by investing in derivatives issued by market counterparties that are linked to the referenced equity(ies), underlying assets, specified index or constituents of the specified index. For these synthetic ETFs, Investors are exposed to the credit risk of the counterparties which used the derivatives, in addition to the risks relating to the referenced equity(ies), underlying assets or specified index. Potential contagion and concentration risks of these counterparties which issue the derivatives should also be taken into account. In addition, a higher liquidity risk is involved if a synthetic ETF involves derivatives which do not have an active secondary market, and wider bid-offer spreads in the price of the derivatives may result in losses in the ETF.

There may also be a disparity between the performance of the ETF and the performance of the underlying index due to, for instance, failure of the tracking strategy of the ETF, currency differences, fees and expenses. Furthermore, where the index/market that the ETF tracks is subject to restricted access, the efficiency in the creation or redemption of units of or shares in the ETF to keep the price of the ETF in line with its net assets value may be disrupted, causing the ETF to trade at a premium or discount to its net asset value. Such risk may have a negative impact on the performance of the ETF and may adversely affect the value of the Product

in which case the Investor may suffer a loss in the investment.

An ETF which primarily invests in securities traded in the domestic A-share markets of the People's Republic of China (which are inherently stock markets with restricted access) through the manager in its status as Qualified Foreign Institutional Investor involves certain risks and special consideration as compared with investment in more developed economies or markets, such as greater political, tax, economic, foreign exchange,

liquidity and regulatory risks. The policy and rules relating to the Qualified Foreign Institutional Investor scheme of the People's Republic of China are or may be subject to change. The operation of such ETFs may also be affected by interventions by the applicable government(s) and regulator(s) in the financial markets.

Prospective Investors should read the offering documents of the Underlying for further information about the risks applicable to the ETF.
