If none of the Underlying Components' Final Fixings is at or below the Knock-out Level on the Final Fixing Date, the performance of the Certificate will be at least 12.00% and above that level will be analogous to the performance of the Underlying, multiplied by the Participation Rate. If at least one of the Underlying Components' Final Fixing Levels is at or below the Knock-out Level, the Performance of the Certificate at redemption will be analogous to that of the Underlying Component with the worst performance. Therefore, the investor may suffer a partial or total loss.

In this table, the assumption was made that Kühne + Nagel Int rs was the worst performing Underlying Component. The selection is purely exemplary.

The table above is valid at maturity only and is by no means meant as a price indication for this structured product throughout its lifetime. The price of this structured product depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table.
